

Piotr Koper

Senior Data Engineer · Platform & Infrastructure

West Midlands, UK · piotr.koper.v0@gmail.com · p-y-t-h-e-c.github.io/portfolio

PROFESSIONAL SUMMARY

Senior Data Engineer with 4+ years of experience at Jaguar Land Rover, specialising in data platform infrastructure, CI/CD pipeline engineering, and cloud infrastructure on GCP. Progressed from pipeline development into technical leadership, currently leading working groups across GitLab CI/CD, Terraform, and Docker image management. Background in logistics and operations management provides strong domain knowledge and stakeholder communication skills. Open to Data Engineering, Platform Engineering, DevOps, and Analytics Engineering roles where infrastructure depth and engineering rigour are valued.

TECHNICAL SKILLS

Cloud & Infrastructure: GCP · Terraform · Docker · Kubernetes · Helm · Cloud Run · GCS · Artifact Registry

CI/CD & DevOps: GitLab CI/CD · GitHub Actions · GitLab Components · Pipeline Templating · Container Scanning · Pre-commit · Workload Identity Federation

Data Engineering: Dagster · Apache Airflow · dbt · ETL / ELT · Data Modelling · Pipeline Architecture

Languages: Python · SQL · Bash · HCL · YAML

Databases: PostgreSQL · BigQuery · Cloud SQL · GCS

Observability: Grafana · GCP Monitoring

PROFESSIONAL EXPERIENCE

Senior Data Engineer · [Jaguar Land Rover](#) · 2022 — Present

Core Data Engineering platform team — infrastructure, developer tooling, and engineering standards. Technical lead across multiple working groups.

GitLab CI/CD Working Group — Lead

- Led refactoring and standardisation of GitLab CI/CD pipeline templates across the data engineering organisation
- Designed reusable authentication template supporting Workload Identity Federation and legacy Service Account Key auth, ensuring full backward compatibility across all projects
- Established pipeline standards and component library adopted organisation-wide

Workload Identity Federation — Owner & Lead

- Sole owner of WIF rollout between GitLab and GCP — designed and provisioned full infrastructure via Terraform (Pool, Provider, bindings)
- Redesigned GitLab CI/CD authentication layer to support WIF while remaining fully compatible with existing SA Key-based projects
- Produced comprehensive documentation covering architecture, implementation, and migration guide

Docker Images Working Group — Lead

- Led design, maintenance, and build of custom Docker images stored in GCP Artifact Registry, used across data engineering pipelines and services
- Implemented container scanning and image governance standards

Terraform Working Group — Lead

- Leading Terraform working group overseeing module standards, provisioning patterns, and IaC practices across the data platform

Notifications System

- Core developer of GCP-based notifications system triggering messages to correct channels based on subscription behaviour and API endpoint calls during pipeline execution
- Fully refactored Terraform module for Cloud Run and PostgreSQL infrastructure; authored extensive documentation and operational runbooks

GitLab Instance Migration

- Part of team designing and provisioning Kubernetes cluster, namespace, and Helm module for GitLab runners during full GitLab instance migration — all infrastructure managed via Terraform

Python Task Orchestrator POC — Lead

- Led evaluation of enterprise Python task orchestrators (Astronomer vs Dagster) against defined criteria
- Produced technical evaluation report adopted as recommendation to Enterprise Technology Board — Dagster selected as preferred platform

CPAT Lead & Planner · [Jaguar Land Rover](#) · 2018 — 2022

Cross-functional programme role managing Capacity, Parts Availability and Timing assessment process across JLR vehicle programmes.

- Built redesigned CPAT Input Matrix addressing existing error states and improving control of deliverables and data input timings
- Developed automated WIP file creation process saving approximately 12 hours per file
- Developed eCAR data scrape tool integrated into WIP file workflow
- Managed stakeholder communication across Purchasing, Supply Chain, and Programme teams

Planning Manager & Logistics Operations · [Halfords](#) · [Aston Martin Lagonda \(DHL\)](#) · [DHL](#) · 2007 — 2018

Over a decade of progressive operations management across major UK distribution and manufacturing environments — Halfords (1.4M units/week), Aston Martin Lagonda, and DHL.

- Consistently built tooling and reports to replace manual processes — Logistics Performance Tool, automated planning tools, redesigned operational workflows
- Selected for competitive DHL Head Start management programme from hundreds of UK and Ireland applicants — one of 28 accepted
- Managed teams of up to 130 people across planning, operations, and e-commerce functions

PROJECTS

Octopus Energy Dashboard · [Personal Project](#) · 2023

End-to-end personal data pipeline tracking energy costs and consumption using the Octopus Energy API.

- Dagster-based pipeline running multiple times daily — ingestion, transformation, and PostgreSQL storage on Oracle Cloud VM
- GitHub Actions deployment workflow authenticating to Oracle VM and deploying pipeline automatically
- Grafana dashboard providing day-on-day, week-on-week, and year-over-year energy cost visualisation
- Stack: Dagster · Python · PostgreSQL · Grafana · GitHub Actions · Docker

EDUCATION

MSc Management and Production · [Technical University of Łódź, Poland](#) · 2001 — 2007

Majoring in Systems and Information Technologies

MSc Information and Communication Technology for Engineers · [Coventry University, UK](#) · 2005 — 2006

Main subjects: Analysis and Design of Engineering Information Systems · Project Management · Software Design for Engineers

CERTIFICATIONS

GCP Professional Data Engineer · Google Cloud · 2021 (expired — experience remains current)
